

**A thing is an entity that is able to interact with another thing.**

Or: two things are entities that are able to interact with one another.

**An event is an interaction between things.**

**A thing or event is elementary if it cannot be divided into other things or events.**

But does that imply it has no details (like a Prime Meridian)?

**Each event results from one or more other events.**

**Time is the chain of elementary events.**

**FULL STOP.**
