

Cosmological redshift has *not* been *deduced* from any observed phenomenon, hence it is a **concoction**.

Accelerated expansion of the universe has *not* been *deduced* from observed phenomena, so it is a **picked-from-thin-air** "explanation" of the supernovae observations.

Expansion of the universe is as **constant** as the *speed of light*:

$$D_H = ct_H .$$

The **cosmological constant**, which has *not* been *deduced* from any observed phenomenon (Einstein himself qualified it as his greatest blunder) has been revived as a **thought-up** "explanation" of the **fabricated accelerated expansion**.

NONE of these should be used as a **fundamental scientific premise!**

<http://henk-reints.nl/astro/HR-Geometry-of-universe-slideshow.pdf> :

The **gravitational constant** G appears to be **proportional to the Hubble time**:

$$G = \frac{c^3 t_H}{2M_U}$$

hence the **FLRW metric**, which also includes the **cooked-up cosmological constant**, is **incorrect**.

It is *very* plausible that the **Planck constant** h also is **proportional to the Hubble time**.

Λ CDM has been built on a pool of quicksand without *any* solid foundation underneath it!

And who can name any **FACT** (*ascertained truth*) from which the **fairy tale** of the **inflationary universe** was deduced?

Stop admiring brainchildren!

DEDUCE from
ascertained truths only!

Renowned scientist

Galilei

Observed &

Deduced!

Due verità non posson mai contrariarsi.

Two truths cannot ever contradict one another.

Standard cosmology

of the last few decades is

BOLLOXES

And, being a Dutchman, I won't apologise for this word.
