

1. About me & how to do science.
2. Renowned scientists & how to do science.
3. Galaxy rotation & dark matter.
4. Twin paradox \Rightarrow time dilation \Rightarrow Lorentz contraction.
5. Measuring the cosmos:
 - a. proper distance \Rightarrow size of universe;
 - b. observed distance = light travel time = lookback;
 - c. cosmological redshift;
 - d. **"Youngiverse" fundamentally unobservable!**
 - e. JWST observations: **wrong** conclusions \Rightarrow **silly** concoctions.
6. Geometry of cosmos:
 - a. derived from readily available observed data (mag., z , angular size);
 - b. big G & Planck constant;
 - c. **Λ CDM completely wrong;**
 - d. CMB redshift, origin, power spectrum, Hubble tension;
 - e. BB & age of cosmos;
 - f. **"Youngiverse" fundamentally unobservable!**
7. Black holes (aren't holes) & silly concept of singularity.
