

1. About me & how to do science.
2. Renowned scientists & how to do science.
3. Galaxy rotation & dark matter.
4. Twin paradox  $\Rightarrow$  time dilation  $\Rightarrow$  Lorentz contraction.
5. Measuring the cosmos:
  - a. proper distance  $\Rightarrow$  size of universe;
  - b. observed distance = light travel time = lookback;
  - c. cosmological redshift;
  - d. **"Youngiverse" fundamentally unobservable!**
  - e. JWST observations: **wrong** conclusions  $\Rightarrow$  **silly** concoctions.
6. Black holes (aren't holes) & silly concept of singularity.
7. Geometry of cosmos:
  - a. derived from readily available observed data (mag.,  $z$ , angular size);
  - b. big  $G$  & Planck constant;
  - c.  **$\Lambda$ CDM completely wrong;**
  - d. CMB redshift, origin, power spectrum, Hubble tension;
  - e. BB & age of cosmos;
  - f. **"Youngiverse" fundamentally unobservable!**
